AMENDMENTS TO THE CLAIMS

The following listing of claims will replace all prior versions and listings of claims in the application:

Listing of Claims:

1. (Currently amended): A system for assisting the regeneration of depollution means associated with oxidation catalyst-forming means implementing an OSC function, constituting a supply of ~~oxygen~~ O₂-and integrated in an exhaust line of a motor vehicle diesel engine, in which the engine is associated with common rail means for feeding its cylinders with fuel,

_____ the system comprising means for analyzing the running conditions of the vehicle and for comparing them with predetermined threshold values, to control the engine in a first regeneration mode of operation with a lean mixture when running conditions are above the threshold values, or in a second regeneration operating mode implementing sequences in which engine operation alternates between stages of rich mixture operation and of lean mixture operation when conditions are below the threshold values.

2. (Previously presented): A system according to claim 1, wherein the depollution means comprise a particle filter.

3. (Previously presented): A system according to claim 2, wherein the particle filter includes a catalyst.

Response to Notice of Non-Compliant Amendment
US Appl. No. **10/595,824**
Attorney Docket No. **LAV0313828**

4. (Previously presented): A system according to claim 1, wherein the depollution means comprise a NOx trap.

5. (Previously presented): A system according to claim 1, wherein the fuel includes an additive that is to be deposited together with the particles with which it is mixed on the depollution means in order to facilitate regeneration thereof.

6. (Previously presented): A system according to claim 1, wherein the depollution means are impregnated with an SCR formulation, performing a function of oxidizing CO/HC.

7. (Previously presented): A system according to claim 1, wherein the engine is associated with a turbocharger.

8. (Previously presented): A system according to claim 1, wherein the running conditions are determined from:

- the load on the engine;
- its running speed;
- the speed of the vehicle; and/or
- the temperature level in the vehicle exhaust line.

9. (New): A method of assisting the regeneration of a depollution device associated with an oxidation catalyst implementing an OSC function, constituting a supply of O₂ and integrated in an exhaust line of a motor vehicle diesel engine, in which the engine is associated with a common rail for feeding its cylinders with fuel, the method comprising:

- analyzing the running conditions of the vehicle, and
- comparing them with predetermined threshold values,
- controlling the engine
 - in a first regeneration mode of operation with a lean mixture when running conditions are above the threshold values, or
 - in a second regeneration operating mode implementing sequences in which engine operation alternates between stages of rich mixture operation and of lean mixture operation when conditions are below the threshold values.

10. (New): A method according to claim 1, wherein the depollution device comprises a particle filter.

11. (New): A method according to claim 10, wherein the particle filter includes a catalyst.

12. (Currently amended): A method according to claim 9, wherein the depollution device comprises a NOx trap.

US Appl. No. **10/595,824**
Attorney Docket No. **LAV0313828**

13. (New): A method according to claim 9, wherein the fuel includes an additive that is to be deposited together with the particles with which it is mixed on the depollution device in order to facilitate regeneration thereof.

14. (New): A method according to claim 9, wherein the depollution device is impregnated with an SCR formulation, performing a function of oxidizing CO/HC.

15. (New): A method according to claim 9, wherein the engine is associated with a turbocharger.

16. (New): A method according to claim 9, wherein the running conditions are determined from:

- the load on the engine;
- its running speed;
- the speed of the vehicle; and/or
- the temperature level in the vehicle exhaust line.
